FACT SHEET

GRAVITY WATER FILTER

Features

This locally handmade gravity water filter is finished inside and out in crystalline glaze. This glaze is particularly beautiful and always different making each piece unique.

The gravity filter consists of two vessels. The upper container is filled with raw water which then filters through the ceramic candle. Safe, cool, filtered water then collects in the lower chamber, to be drawn off from the spigot. Top up as required to match consumption.

Water passes through the ceramic filter candle to remove at least 97% of chlorine, iron, copper, lead, manganese, zinc, mercury, aluminium, lindane, dieldrin, chloroform, bacteria and other organic compounds. It removes 86% of cadmium as well as bad tastes and odours.

Benefits of the Australis Ceramic Filter Candle

- Australian Made
- Porous to 1 micron (one thousandth of a millimetre) to filter out dirt, rust, giardia and cryptosporidium cysts
- Activated carbon absorbs chlorine, chemicals, pesticides, heavy metals, bad tastes and odours
- Colloidal silver coating kills bacteria
- Filters out dirt, giardia and cryptosporidium
- Absorbs chemicals, bad tastes and odours
- Purifies around 1000 L of water (less in hard water areas)
- Replace six monthly or as required dependant on water quality

Prior to first use

- Overnight soaking of the candle upside down in a glass of water will enhance its ability to filter water quickly once installed.
- Please rinse the inside of upper container and lower chamber before operation to remove any possible remnants of pottery dust.
