

SOLAR HOT WATER

"THE CLEVER SOLAR SYSTEM"

At Least 233 Days Free

**The Most Advanced
System You Can Buy**

**Ideal with Solid Fuel
Stoves & Heaters**

**Conserve Water as well as
Money**

Silent Operation

7 - 10 Year Warranty

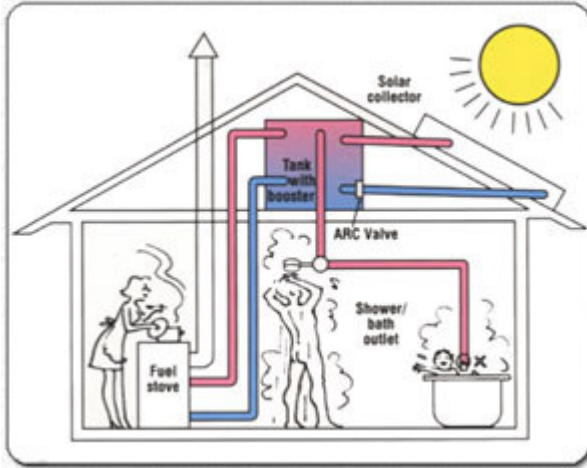

Whether for Commercial, Domestic, Industrial or Municipal Hot Water applications, no other system is as attractive as **Solar~Mio**. Even on Heritage buildings, where there is slate, corrugated iron or tiles, Solar~Mio collector panels do not look obtrusive.

Solar~Mio Systems do not feature heavy, bulky roof tanks. The tank is installed out of sight in a cupboard or under the eaves at the back of the house. Simple Installations with no need for major modifications.

Solar~Mio panels are slimline and anti-glare. Far from looking like a solar hot water system, they are often mistaken for Skylights.

Save a minimum 65% of your hot water costs, even in the colder southern regions of Australia. In the warmer northern regions, Solar-Mio gives you free solar hot water virtually every day of the year.

Solar-Mio is super efficient. The unique Black Nickel absorption surface was developed by the C.S.I.R.O. to maximise panels sunlight absorption. Over twenty years continuous research and development have gone into today's SolarMio system. Our Solar Gold storage tank is fully insulated to retain heat longer. Solar-Mio panels have anti-glare prismatic glazing that is cushion-mounted to avoid breakage.

Frost Protection Systems protect panels from the force of freeze build-up during cold southern winters. Pipes are made from copper, which will outlast other material. The storage tank features a feed tank, safety tray, low profile solar connections, stove connections and an electric booster element.

Ideal with Solid Fuel Stoves and Heaters.

Solar-Mio specialises in solid fuel connections which can be installed in new or existing homes. Wood heaters and cookers fitted with water jackets are commonly used to boost Solar-Mio solar hot water systems. Conserve water as well as money. Using gravity to create pressure, this model reduces water consumption up to 30% over a mains pressure system.

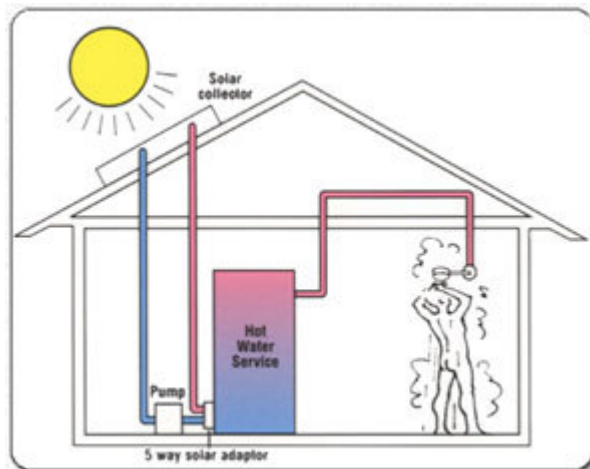

At least 233 days free, even under pressure.

You don't have to give up mains pressure hot water to enjoy the savings of solar. The new Solar-Mb Platinum Series lets you enjoy the best of both worlds, and the savings are exactly the same.

Our Solar-mio adapts to all new and existing mains pressure systems. The Solar-Mio mains pressure system simply feeds into an existing hot water system. An exclusive 5 way solar adaptor allows the Solar-Mio to be fitted to most makes of mains pressure hot water tanks, whether it be a new or existing service.

Domestic, industrial, commercial, no size too big or small.

The Solar-Mio mains pressure system is the ideal solution for larger projects

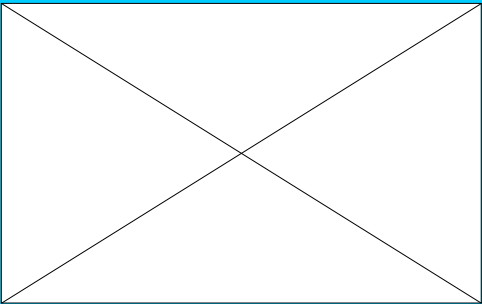

like gyms, hospitals, schools, sportsclubs, pools etc., where people demand large volumes of high pressure hot water, and where administrators are looking for ways to cut overheads.

Silent operation. Super efficient, virtually maintenance free, the only choice for both economic and environmental reasons. And Solar-Mio is whisper quiet too.

Advanced technology and efficiencies derived from over 20 years of research and development apply to both our constant and mains pressure systems. Our Solar System panels carry a 7-10 year warranty as proof of their superior quality.

Solar-Mio can be tailored to any needs from the smallest domestic collection units of 2 square metres, to massive commercial collectors of 500 square metres or more.
